Table EU LIQB on qualitative information on LCR, which complements template EU LIQ1

The main factors influencing the Group's LCR are changes in the liquidity buffer, which is largely made up of highly liquid government securities and funds held with the central bank, and cash outflows, primarily related to unsecured wholesale funding.

The Financial Group uses Retail deposits as the main source of financing. More detailed information on the concentration of funding sources in note 4 to Interim financial report Šiaulių bankas AB and the bank's Group for 1 quarter 2024.

Liquidity buffer is formed of high-quality assets that can easily be converted into cash without any restrictions and with minimal losses. Due to that fact the Financial Group possesses a significant debt securities portfolio, which is highly liquid.

The Group has insignificant derivative positions consisting of forward foreign exchange contracts and derivatives linked to the prices of financial instruments. Their share of total assets is 0.48%.

The Financial Group's 100% of assets are accounted for in euro and 98 % of liabilities. Therefore it not gives rise to an inherent risk of currency mismatch in the LCR.
